course summary (repetitive boilerplate, ONLY if we have time)

ps6

- do not overcomplicate!
  - better to have simple clean code that does the job
  - than messy complex fancy code that is wrong
- if parts of code take long time to run, say $> 10min$
  - optimize it, take random sample, etc
- again, it always must start from the very raw data!
- easy to make mistake:
  - think about it AND cross check; correctness is important!

ps6

- explain what you are doing!
- interpret things!
  - eg when you run descriptive stats, *and* find sth interesting, put a comment and say what you have found in few words
  - (don't comment output of every command)

ps6

- google things!
- before writing the code check if someone already wrote it
- and build on others work! ie copy and adapt and improve
- eg googling 'world development indicators stata'
  - yields `http://www.stata-journal.com/sjpdf.html?articlenum=dm0045`
  - "Using the world development indicators database for statistical analysis in Stata"

get into flow with programming!

https://en.wikipedia.org/wiki/Flow_(psychology)

publish or perish

- coding is fun
- but don't lose the end goal from your sight
- yes, you are an amateur software engineer–it helps a lot
  - it's actually necessary these days!
- but you are a professional soc sci
- your end goal is a publication
- 'keep article pipeline full'
  - at any time i have at least 3 articles under review
- how about you? submit paper right now!
  - start simple, even just some des stats...but keep on submitting papers

this is super important! remember this!!

- publishing (and maybe conferences) is *the only way* to get in touch with people exactly in your area
- there's just a handful of them,
  - almost never at you university, sometimes at a conference
  - usually at a journal where you submit; (if you pick the right one, almost always at a journal)
- this is *the only way* to take your work to next level!!
  - it does take time; start now; otherwise you may never make it
- or even ssrn or arxiv etc

future research

- you've probably realized that i am into
  - Stata, Python, data
- and always happy to discuss them
- let's stay in touch!

what next?

- if didn't yet, print out box1 from `https://journals.plos.org/plosbiology/article?id=10.1371/journal.pbio.1001745` and hang on your fridge, over your desk, etc
- make use of your data management skills...
- use it or lose it
- apply for postdocs
- collaborate with faculty
  - faculty need your data management skills
  - they know much less about data mgmt than you!
  - and in general, just make $!

make $

- industry data jobs usually require SAS, SQL, Python, Java
- but there are many Stata jobs, eg:
- http://www.job-search-engine.com/keyword/stata/
- and a ton of data science jobs:
  - http://www.icrunchdata.com/
  - http://www.cybercoders.com/
