

The effect of social transfers and social capital on happiness of elderly

Adam Okulicz-Kozaryn Vistula University and Rutgers
Leszek Morawski Polish Academy of Sci

August 30, 2018

Ersa2018Cork; funded by NCN 2016/21/B/HS4/0305

about this project

- i am new to aging/gerontology
- first what we have already done (still need advice!)
- then work in progress

why bother?

- Europe is aging
- aging will be a major problem of this century
- all countries grapple with lack of funds for social transfers (pensions, sickness and disability benefits, etc)
- can we make up for lacking social transfers elsewhere?
- after all, social transfers are the the goal, but only a tool
- the goal is SWB, and there are many ways to achieve it, not only through \$
- we will focus on the effect of social capital and specifically volunteering among the elderly
- [Eur, esp SE doesn't volunteer, should learn from US]

why vol– >SWB? 3 happiness theories

- ◇ **adaptation theory** [\$, but not social capital] (Brickman et al., 1978)
 - ▶ adjustment to external stuff
 - ▶ 'hedonic treadmill'
- ◇ **multiple discrepancy theory** [tv watching!] (Michalos, 1985)
 - ▶ social comparison
 - ▶ comparison to various standards
- ◇ **needs/livability theory** [humans have a need to be among other humans] (Veenhoven and Ehrhardt, 1995)

data

- SHARE: Survey of Health, Aging and Retirement in Europe
- underused data for SWB research!
- now most European countries
- many, many modules and variables, eg:
 - comprehensive health measures (like AddHealth);
 - comprehensive income/wealth variables (like PSID);
 - activities; family relationships; healthcare, past experiences and future expectations
-
- and again, elderly matter, and they will matter even more

CASP, Cronbach's $\alpha=.82$, factor loadings:

- Control, Autonomy, Self-realization, and Pleasure

-0.50	My age prevents me from doing the things I would like to
-0.52	I feel that what happens to me is out of my control
-0.57	I feel left out of things
0.45	I can do the things that I want to do
-0.19	Family responsibilities prevent me from doing what I want to do
-0.38	Shortage of money stops me from doing the things I want to do
0.58	I look forward to each day
0.67	I feel that my life has meaning
0.49	On balance, I look back on my life with a sense of happiness
0.68	I feel full of energy these days
0.72	I feel that life is full of opportunities
0.74	I feel that the future looks good for me

vol— >SWB, but for whom?

- need some min income! cannot survive on volunteering
- but plenty of evidence: even poor manage to volunteer
- and many poor survive only because they receive help from family friends and volunteers
- then perhaps volunteering is especially effective for poor and middle class?
- if you're rich, volunteering may matter less:
 - you'd rather start a foundation, give to charity, etc
-
- then indeed volunteering may be especially good strategy for persons and countries with tight budgets!

vol— >SWB, but for whom?

- yet pensions are different!
- you get it anyway, so doesn't matter for vol
- no opportunity cost

vol— >SWB, but for whom? (solid: non-vol)

discussion

- sure, still: social transfers at person level
are like welfare state at country level, BUT:
- positive spillovers from volunteering:
 - self-satisfaction from helping
 - and gratitude from being helped;
 - \$ saved (say on helping kids cross the road)
- but neg spillovers from income! (guess incl soc transf)
 - relative deprivation, comparisons, envy, etc
- simply handing out money can be a perverse incentive
 - see recent experiment by Oswald in UK
 - welfare recipients became poorer and less happy

now some prelim findings

- looks like the poorer the country,
- the more volunteering (and pensions) matter for SWB

volunteering – > SWB

the higher the vol %, the lower the effect on SWB

CASP corr; ingroup, drop-in-a-bucket effects?
