

## needs/livability theory (?)

- humans, like other animals have needs:
  - physiological: water, food, sleep, etc
- social: biophilia, social capital, nature, etc
  - and higher needs: belonging, self-actualization, etc
- like Maslow's Hierarchy of Needs
- satisfied needs—— >happiness
- then there are attr of places, environment, or ecology
  - if it is “livable” —— >happiness
- optimistic for pub pol: can satisfy needs and provide livability
