outline

why data management?

stata v sas v r

let's fire up stata

[*] bonus—data sources [skip, can look at home]

introductions

- ◇ <https://theaok.github.io>
- ◇ and see my goog scholar
- ◇ and i will tell you what data i have been using
- ◇ if you use same data then i can share my code with you!
-
- ◇ yourself? (see if others overlap: can collaborate!)
 - research interests and data?
 - software? eg sas, spss, stata, python, r
 - specific expectations for this class?

before we start: extra credit opportunities

- ◇ present sth not covered (has to be GIS, of course)
- ◇ present alternative way of doing sth that we have covered
- ◇ civic engagement: Michael D'Italia
michael.ditalia@camden.rutgers.edu
- ◇ talk to Darren or Sarah <https://rand.camden.rutgers.edu/people/staff/>

data revolution!!

- ◇ there are many jobs and there will be more that require programming
- ◇ there will be more jobs like that because we have more and more data: twitter, facebook, netflix etc
- ◇ these jobs will even ask you for a sample of your code
- ◇ data will be more important in any field
- ◇ qualitative data (pictures, text, etc.) are just rich quantitative data and can be analyzed like quantitative!
- ◇ everything can be quantified or not? any examples of non-quantifiable things ?

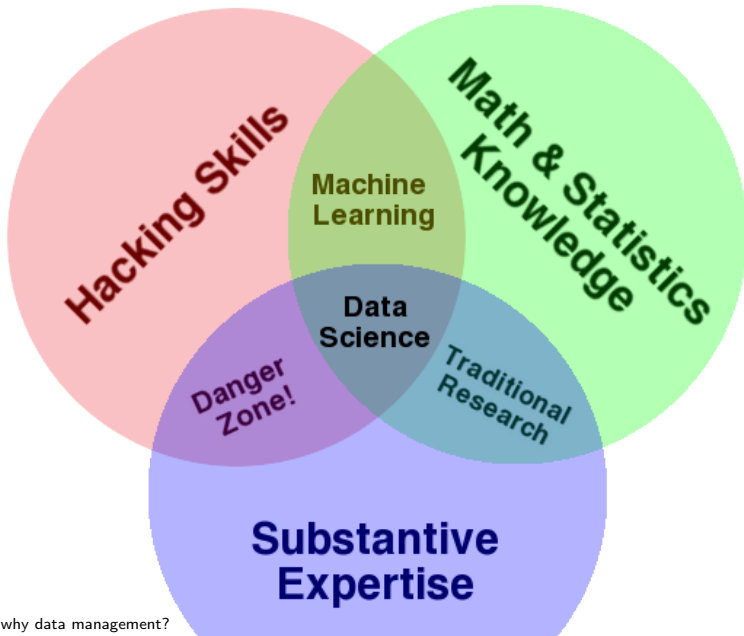

data management is fundamental

- ◇ in order to analyze data you need to manage it first
- ◇ GIGO (Garbage In Garbage Out)
 - if data management fails, data analysis fails
-
- ◇ takes more time to prepare data than to analyze it
- ◇ start early with the right data!

(social) data science or CSS (comp soc sci)

- ◇ <http://gking.harvard.edu/files/LazPenAda09.pdf>
- ◇ a person good at computer programming (eg stata)
- ◇ a person who can manage, visualize and infer useful information from data
- ◇ need to like programming
- ◇ willing to learn programming beyond stata, eg python
- ◇ <http://radar.oreilly.com/2010/06/what-is-data-science.html>
- ◇ <http://tdwi.org/Articles/2011/01/05/Rise-of-Data-Science.aspx?Page=1>
- ◇ <http://www.quora.com/Educational-Resources/How-do-I-become-a-data-scientist>

already have stat/math and subst, need hacking!

a critical decision!

- ◇ it takes months to get productive with software
- ◇ it takes years to master software
- ◇ huge time investment
- ◇ in soc sci dat man the choice is: sas, stata, r, python
- ◇ there's more (Lisrel, HLM, etc) but the above are major
- ◇ excel and spss are junk that no one should use

which one?

- ◇ stata: powerful, no need to learn any other soft; sufficient for vast majority of projects
- ◇ r: most powerful stat soft (Py seems to be taking over)
- ◇ stata: user friendly, fast, very concise code
- ◇ r: user unfriendly, slow; weird code!
- ◇ py: somewhere in between
- ◇ all: great user community: listserv, websites, etc.
- ◇ sas: a dinosaur (still, often industry standard), very verbose
- ◇ r,py: free, stata: around \$300; sas over \$1k

which one?

- ◇ “stata is for people getting things done; r is for geeks showing off”
- ◇ “people using canned software like stata don’t know what they are doing”
- ◇ CONSIDER:
 - your supervisor/field usage
 - are you a geek?
 - do you need to do things that almost nobody does?
 - what’s your style? (software is like cars or handbags)

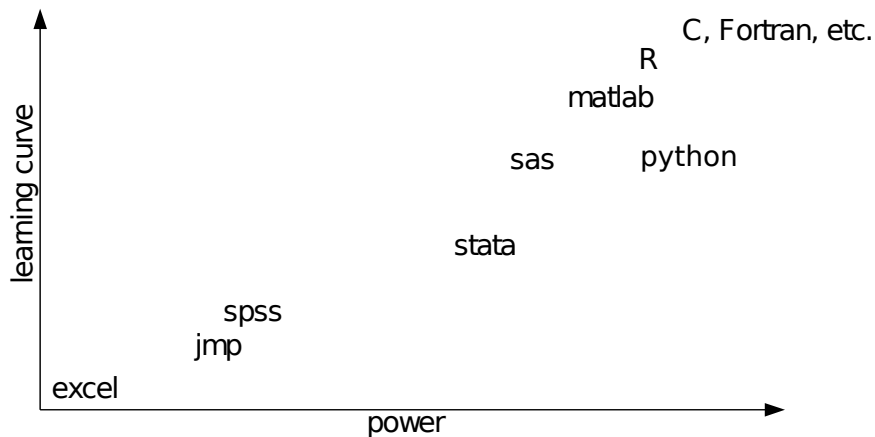

stata v sas v r **sas**

spss

R

which one?

stata interface; and do intro.do

looking

- ◇ exploring your data is critical!
- ◇ we will learn many commands to understand data
- ◇ most basic: `d` `sum` `tab`
- ◇ remember this:
 - to manage data well, you need it to understand it well
 - it takes a lot of time to understand it well, and hence
 - either manage data you are already familiar with
 - or data that you are ready to invest a lot of time into knowing
- ◇ again, the bottomline in this class is to manage data that is of great interest to you
