outline

outline

a note

- ◇ note: i always put lots of things at the beginning in the “misc section” that are not necessarily that important (eg you may not need to print them)

let's introduce ourselves

- ◇ this is a small class, which is great for you
- ◇ we can customize it better
- ◇ we can have more class discussions
- ◇ and make it less formal than a usual lecture
- ◇ btw, did you get “welcome to regression” email? if not email me!

about myself...

- ◇ `https://sites.google.com/site/adamokuliczkozaryn/`
- ◇ data: mostly surveys: gss, wvs, eurobarometers

about yourself...

- ◇ your research interests?
- ◇ data you're using?
- ◇ specific expectations for this class?

my teaching approach

- ◇ interrupt me during the class
- ◇ my approach to teaching methods is applied
- ◇ class is not useful if you do not use the material
 - really interested in teaching you to apply your skills
 - hence, we will use stata
 - and we will have many examples
 - and many materials for self-study
- ◇ min math, max application!

warning!

- ◇ difficult class!
 - set lots of time aside
 - do not get behind—very difficult to catch up later
- ◇ i'll be harsh in grading
- ◇ but i will spend as much time with you as needed!
 - ask questions; email me; stop by; do it early!

how it differs from qm1?

- ◇ qm1 just prepares for qm2
- ◇ qm1 is not very useful
- ◇ qm2 is much more useful than qm1
- ◇ qm2 requires much more work than qm1
- ◇ qm2 is more fun than qm1
- ◇ qm2: you have to read Gujarati book (not necessary to read book in qm1)

mechanics

- ◇ read carefully applied regression book
- ◇ read carefully slides
- ◇ make sure you understand **everything crystal clear**
- ◇ if any slightest doubts, mark it up, stop by my office
- ◇ unlike most other classes, some stuff is non-intuitive
 - must let it digest, set it aside, come back to it several times
 - practice, practice, practice

Gujarati?

- ◇ if you are little more mathematics, supplement the green book with gujarati
- ◇ pretty detailed and comprehensive
- ◇ may be little overwhelming
- ◇ dont have to understand everything
 - esp may skip appendices to each chapter and heavy math
 - esp most of math is unnecessary
 - but v important: intuition, application, mechanics, interpretation
- ◇ and you may want to reread it several times every few weeks to have it sink in
- ◇ ask questions!

outline

why this class is useful

- ◇ there are many jobs that require statistical skills
- ◇ we have more and more data
- ◇ data analysis will become more important in every field
[*]<http://www.amazon.com/Super-Crunchers-Thinking---Numbers-Smart/dp/0553805401>
- ◇ data analysis is usually done (in social science) with regression that you will learn in this class

this class is about research

- ◇ you do phd to do research and research only!
 - otherwise it doesnt make sense!
- ◇ if you want to *do* public administration, community development etc, just get BA/MA
- ◇ if you want to research them and other things do PhD
- ◇ typically, successful PhDs become academics or researchers in various organizations
- ◇ obtaining PhD and not doing research is failure and waste of time
- ◇ if you want to be manager, leader etc, just get MBA!!

outline

rule

- ◇ never run regressions without doing descriptive statistics first
- ◇ you need to understand data before making inferences from it

descriptive statistics first !

◇ what is the level of measurement ?

◇ interval/ratio

◇ ordinal

◇ nominal

examples ?

◇ in ols regression: DV (Y) < — IVs (Xs)

- dv (outcome var) has to be interval/ratio
- all rhs (predictors) var have to be interval/ratio or dummies (1/0); shouldn't use ordinal variables
