XXX TODO ADD TO EBIB AS KEYWORD PAPER-CODE-NAME AND TAG WITH EBIB KEYWORDS

TODO srch ebib for 'col'

It is commonly lamented that much of social scientific research is done on WEIRD people, e.g., people from Western, Educated, Industrialized, Rich and Democratic (WEIRD) societies. If not WEIRD, at least the bias is towards the Global North. SWB research is not an exception. Vast majority of SWB research is done in Global North.

Another limitation/gap is person level and society/nation level and/or region/province level focus. Virtually all SWB research analyzes person level data that are representative of (or nested within) society/nation level and/or region/province level. Research at neighborhood/community level is virtually non-existent.

The present research aims to fill in both of these gaps.

Nationally representative datasets sometimes ask about some community/neighborhood characteristics (eg US GSS or German SOEP), including in Latin America, e.g., ISSP (Gandelman et al. 2012), but the data are typically not identifying actual communities/neighborhoods, and if they do (e.g., restricted version of US GSS), the data are not representative of communities/neighborhoods. There are only a handful of exceptions, and all of them in Global North (and China): Ma et al. (2017), Helliwell et al. (2018), Ziogas et al. (2020), Mouratidis (2017, 2020b,a), Mouratidis and Yiannakou (2022), Weckroth et al. (2022), Anon (2021), Pfeiffer et al. (2020), Ciorici and Dantzler (2019), Du et al. (2017), Ala-Mantila et al. (2017), ?

To our best knowledge, there is simply no neighborhood/community level dataset in Global South (except China) containing SWB measures. The only SWB dataset representative of neighborhoods/communities in Global South is CaliBRANDO (Martínez and Short 2020).

Colombia has a high prevalence of informal work above 50% and workers in informal sector are less happy (Hurtado et al. 2017).

H0: being close to MIO;;benefits outweigh disamenities, as cutting commute as per Kahneman is key to swb

Cali

Sebastian de Benalcazar, a Spanish conquistador, founded Cali in 1536, but it only developed economically from 1950s. Cali is a major collection and distribution and industrial centre britannica.com/place/Cali. In 1938 Cali was only 4 sq km and 88k population. In 1964 91 sq km and 638k population (Dávila 2001). And in 2020 563 sq km and about 2.2m city population. citypopulation.de/en/colombia/admin/valle_del_cauca/76001__cali.

dens 3,600/km², metro 3.4m dane.gov.co/files/varios/informacion-capital-DANE-2019.pdf

Performance Overview

Figure 1: wef: source and descr

Data and methods

TODO:lina

the unique data! the only one such data representative of neighbourhoods in global south, to best of our knowledge

1 Results

About 1150 or 92 perc yes, and 100 or 8 perc miobarrio no. In table 1—if there is MIO in neighborhood people are less happy, and this is opposite to Bus in 3 in SOM that has positive effect (though insignificant in more eaborate specifications).

A very strong result—if there is MIO in barrio, residents are less happy by .4, which is a moderate to large effect. it is slightly larger than one step on health variable, say from “Regular” to “Buena.”

Note this is not due to estratosocioeconomico, as we control for it. We also control for Communa dummies.

Next, similar results in 2–5th quintile is 18 min or more—those who have more than 18min to MIO are happier.

What is dstinctive about 2 is that it is only one such among 10 different amenities such as park, doctor, store, restaurant etc that is negative (and the only positive is biblioteca; others dont have significant consistent effect)

Similarly in SOM How to get to the nearest MIO location (Como se moviliza al paradero del MIO mas cercana) in 4 those who take motorcycle or car (Moto o carro) or those who reply NS/NR “no MIO” ???—they are happier.¹

¹We postpone to SOM as there are only 42 obs on “Moto o carro” and 37 on “NS/NR,” vast majority, 84% walks “Caminando.”

Table 2: OLS regressions of satisfaccionvida.note 5th quintile is 18 min or more

findings similar do dantzler cicori–public transpo lower satisfaction “Surprisingly, the analysis showed that [...] access to transportation have an inverse relationship with the satisfaction of residents with their neighborhood”

rt so as they say, or rather me hypothesize that as in china women, exposure to world may lead to lower happiness; but cali not that poor relatively to aaround it, if anything rich; so maybe siimply more pollutions from mio: noise, air, light, etc–and it may proxy not mio itself but busy road and traffic!

interesting maybe those with bas are crappier

the possible mechainsm is pollution, notalbly air bit also light and noise—we know that pollutin kills happiness cite from ecol econ notably; and then we know that pollution is worst within like 300m from hwy; and thats where mio is mostly located on colombian equivalents of western hwys with heavy traffic

have that pic of graphs of pollution from hwy

Much of urbanization in global South is haphazard resulting in crowding and poor living conditions such as living close to open sewer and heavy traffic. eg hong21 That's what MIO may proxy dense, noisy, heavy traffic, polluted and unhealthy locations see figures

ONLINE APPENDIX

0.5

1.0

Figure 4: Scatterplot matrix.

So in fig ??: depression may be low around 0 for many people, but among those the other 3 vars differ widely. And then for life satisfaction many at 10, but among those preoccupation varies a lot.

Figure 5: Variables' distribution.

Figure 6: Transpo.

Interesting wide variability here in terms of time to various amenities

Figure 7: Variables' distribution.

2 Results

2.1 Mala MIO

MIO often is a stressful and unhappy experience around it and inside of it due to crowding and traffic—for instace see pictures taken by one of the authors.

Figure 8: MIO crowding around station and inside.
