ps6/final project

- do not overcomplicate!
- better to have simple clean vis that does the job
- than messy complex fancy vis

ps6/final project

- explain your vis!
- interpret things! (comment or text box)

ps6/final project

- google vis!
- check if someone already did it
- and build on others work! ie copy and adapt and improve

get into flow with programming!

https:

[`//en.wikipedia.org/wiki/Flow_\(psychology\)`](https://en.wikipedia.org/wiki/Flow_(psychology))

publish or perish

- vis is fun
- but don't lose the end goal from your sight
- your end goal is a publication
- 'keep article pipeline full'
- at any time i have at least 3 articles under review
- how about you? submit paper right now!
- start simple, even just some vis...but keep on submitting papers

this is super important! remember this!!

- publishing (and maybe conferences) is
 - *the only way* to get in touch with people exactly in your area
- there's just a handful of them,
 - almost never at you university, sometimes at a conference
 - usually at a journal where you submit;
(if you pick the right one, almost always at a journal)
- this is *the only way* to take your work to next level!!
 - it does take time; start now; otherwise you may never make it
- and can just put online, eg ssrn or arxiv etc

future research

- you've probably realized that i am into Python and data
- and always happy to discuss them
- let's stay in touch!

make \$

- industry data jobs usually require SAS, SQL, Python, R
- a ton of data science jobs:
