

# bonus ps; due next week

[version: Wednesday 30<sup>th</sup> November, 2016 10:30]

1. this ps is “bonus”: note that per grading scale only 6ps are required; the 7th will count towards extra credit; hence, if your grade looks good, you may skip it!
2. use something covered in this class; or not covered (but of course related to 'research methods'!); ideally should be rather comprehensive in scope, showing your mastery of material
3. examples: interpret statistics in more academic papers (like ps6); produce some more statistics on your own: means, medians, correlations, regressions; submit yet another draft of final project; do a case study! (yes, qualitative methods are fine too!)
4. must be different from your earlier ps!

---

## general directions (always the same):

- ps is due in class in hardcopy
- keep it short
- if you are stuck, email me early! also can email me if you want some feedback and make sure you are on the right track, etc
- if your handwriting is bad, please type
- I may want to discuss your assignment in class, which should be beneficial to you and give you more feedback; if however, you'd like to keep it private, let me know!
- ideally you want to use this class to write a research part of your capstone
- think if you can engage civically—see section 'civic engagement component' in syllabus
