

A recent Gallup poll suggests that 25.5% of Texans do not have health insurance as of June 2012. Assuming that the uninsured rate stayed constant, what is the probability that two randomly selected Texans are both uninsured?

% Uninsured, January-June 2012

■ Higher range ■ Midrange ■ Lower range

- (a) 25.5^2
- (b) 0.255^2
- (c) 0.255×2
- (d) $(1 - 0.255)^2$
