outline

why data management?

stata v sas v r

let's fire up stata

[*] bonus-data sources [skip, can look at home]

introductions

- `https://theaok.github.io` and go to my goog sch
- and i will tell you what data i have been using
- if you use same data then i can share my code with you!
-
- youf? (see if others overlap: collaborate!):
- research interests and data?

outline

why data management?

stata v sas v r

let's fire up stata

[*] bonus—data sources [skip, can look at home]

data revolution!!

- ◇ most jobs/tasks require or benefit from programming
- ◇ qualitative data (pictures, text, etc.) are just rich quantitative data and can be analyzed like quantitative!
- everything can be quantified or not? any examples of non-quantifiable things ?

data management is fundamental

- ◇ in order to analyze data you need to manage it first
- ◇ GIGO (Garbage In Garbage Out)
 - if data management fails, data analysis fails
-
- ◇ takes more time to prepare data than to analyze it
- ◇ start early with the right data!
- S

(social) data science or CSS (comp soc sci)

- <http://gking.harvard.edu/files/LazPenAda09.pdf>
- a person good at computer programming (eg stata)
- a person who can manage, visualize and infer useful information from data
- need to like programming
- willing to learn programming beyond stata, eg python
- <http://radar.oreilly.com/2010/06/what-is-data-science.html>
- <http://tdwi.org/Articles/2011/01/05/Rise-of-Data-Science.aspx?Page=1>
- <http://www.quora.com/Educational-Resources/How-do-I-become-a-data-scientist>

already have stat/math and subst, need hacking!

a critical decision!

- it takes months to get productive with software
- it takes years to master software
- huge time investment
- in soc sci dat man the choice is: sas, stata, r, python
- there's more (Lisrel, HLM, etc) but the above are major
- excel and spss are junk that no one should use

which one?

- stata: powerful, no need to learn any other soft; sufficient for vast majority of projects
- r: most powerful stat soft (Py seems to be taking over)
- stata: user friendly, fast, very concise code
- r: user unfriendly, slow; weird code!
- py: somewhere in between
- all: great user community: listserv, websites, etc.
- sas: a dinosaur (still, often industry standard), very verbose
- r,py: free, stata: around \$300; sas over \$1k

which one?

- “stata is for people getting things done; r is for geeks showing off”
- “people using canned software like stata don’t know what they are doing”
- CONSIDER:
 - your supervisor/field usage
 - are you a geek?
 - do you need to do things that almost nobody does?
 - what’s your style? (software is like cars or handbags)

sas

spss

R

which one?

stata interface; and do intro.do

let's fire up stata

looking

- exploring your data is critical!
- we will learn many commands to understand data
- most basic: `d` `sum` `tab`
- remember this:
 - to manage data well, you need it to understand it well
 - it takes a lot of time to understand it well, and hence
 - either manage data you are already familiar with
 - or data that you are ready to invest a lot of time into knowing
- again, the bottomline in this class is to manage data that is of great interest to you
