this version: Sunday 25<sup>th</sup> November, 2018 16:34

## outline

google.com/mymaps (almost like qgis!)

other online mapping options

more about mmqgis

if time: final\_project.pdf

## examples

- ◇ <http://www.njspotlight.com/stories/12/12/20/crime-in-new-jersey/>
- ◇ <http://www.livebolamap.com/>
- ◇ can use for collaboration—just enable editing for anyone!
  - can also enable editing for a select group of folks
  - say those with special link
  - great tool for collaborative mapping!

## why online maps?

- ◇ very easy to share;
  - higher quality than printout or even pdf
- ◇ can zoom in/out, pop up features etc
- ◇ especially good for low-level (hi-res) mapping
  - because you have a neat basemap with all the details...
- ◇ can click to pop out other variables
  - (like identify feature in qgis but less clunky)

## why online maps?

- ◇ even can have your own business/service/app/etc
- ◇ just display something interesting on the top of a google map
- ◇ e.g. <http://www.trulia.com>
- ◇ sounds impossible?
- ◇ look what Straso did:
- ◇ <http://cure-cnccs.camden.rutgers.edu/>
- ◇ for another local example see <http://camden-data.org/#body>

## before we get started

- ◇ need to have google account
- ◇ why google?
- ◇ actually, i've been playing with online mapping a lot
- ◇ found google maps much better/easier than anything else
- ◇ but you are free to use any other service, say bing
- ◇ in fact, you do not have to use online mapping at all
  - neither for next ps nor for final project
  - (but you need to compensate with something else)

## basic things in regular google maps

- ◇ (may not work sometimes: guess browser or OS)
- ◇ `https://maps.google.com/maps`
- ◇ search for 'rutgers camden'
- ◇ but can do polygons, too: '08102', 'university city, pa', etc
- ◇ can do lat/long: '38.8977 N, 77.0366 W' or '38.8977 ,  
-77.0366'
- ◇ `http://www.learner.org/jnorth/images/graphics/mclass/  
Lat_Long.gif`
- ◇ we'll be loading kml, which is just a bunch of coordinates

## outline

google.com/mymaps (almost like qgis!)

other online mapping options

more about mmqgis

if time: final\_project.pdf

## fire it up

- ◇ <http://google.com/mymaps>
- ◇ interface almost like qgis
  - some rudimentary tools at the top
  - layers on the left
  - even data table is accessible
- ◇ in the future, maybe all gis will be done online like this
  - for now, still need software like qgis

## not only display of imported kml; can create kml!

- ◇ as any google maps: markers, driving, cycling, etc
- ◇ also can draw any lines, polygons
- ◇ can add attributes
- ◇ can export as kml
- ◇ let's do it!

- <http://google.com/mymaps> **will generate your own data**
- ◇ this is actually made for generating your own gis data
  - ◇ zoom in on Camden NJ—can just search it search box
  - ◇ select placemark from the top and put onto R and mark 'R'
  - ◇ and put placemark on patco station and call 'patco'
  - ◇ from line segment select 'Add walking route'
    - and make a line to patco station (double click to end it), name it 'path' (and pop up distance)
  - ◇ from left menu let's 'Add layer' (cant have shapes and routes on one)
    - from line segment menu select 'Add line or shape'
    - put a polygon on parking lot (just draw line around it)
    - call it 'park'; click it to pop up acres; save it as kml

# kml

- ◇ just another vector format like shp
- ◇ and just one file as opposed to shp
- ◇ can just use qgis to turn shp into kml
- ◇ but kml is a popular format and can often get data in kml
- eg <http://www.census.gov/geo/maps-data/data/tiger-kml.html>

## loading kml from goog maps to qgis

- ◇ click main menu (three vertical lines at the top-left):
  - 'Export to KML/KMZ' and check KML!! (qgis may dislike KMZ)
- ◇ load it to qgis as any vector layer
  - make sure you click 'Select All' !
- ◇ and viola! we have it in qgis
  - add openlayers basemap to put it in context

## can get creative

- ◇ mark points where you think it is unsafe
- ◇ mark your travel destinations (in addition to that map on your wall with pins)
- ◇ mark your jogging route (or use one of those apps to record it and then download to qgis)
- ◇ get creative!

## timeline

- ◇ as you imagine, google records your location
- the good thing is that you can download it :)
- ◇ <http://google.com/maps>
  - click menu (3 horizontal lines on the left)
  - click 'Your timeline'
  - can browse it by date
  - at the bottom right click cog icon and
  - 'Download a copy of all your data'
  - select kml instead of json

## how about just displaying kml from qgis?

- ◇ can do that, too; though little less handy than in qgis
- ◇ can just export kml from qgis
- ◇ in fact can put the thematic map straight from qgis onto google maps!
- ◇ but first, simplify polygons

## simplify polygons

- ◇ make it smaller so that it loads faster
- ◇ load our fav nj counties
- ◇ `https://docs.google.com/uc?id=1xJDhcRCkgv7k4tNCa720og5bohV6dTB2&export=download`
- ◇ Vector-Geometry Tools-Simplify Geometries
- ◇ and simplify polygons with tolerance of 1,000
  - if you do something like 25k, you'll mutate nj too much!)
- ◇ really, as a rule, simplify all data before online display

## make thematic map and export to kml

- ◇ say pop2010 3 classes (tertiles)
- ◇ can also make it transparent if you want to
- ◇ MMQGIS-Import/Export-Google Maps KML
  - (just keep the defaults and play with them at home)

## uploading to google maps

- ◇ `http://google.com/mymaps`
- ◇ from left menu: 'Add layer' and then Import

## make it pretty!

- ◇ bottom of left menu: adjust basemap
  - i like similar non-contrasting colors
  - either lightish or darkish
- ◇ can also play with “Individual styles”

# ideas

- ◇ these ramps colors are quite lame
  - may actually want to click and edit and pick some opposing colors
- ◇ like green and red
  - especially if there are few classes, like 3
  - then do say red, yellow, green

## other things

- Under 'Individual styles' can also 'Set labels':  
'COUNTY\_LAB'
- ◇ make it light so it doesn't obscure colors!
- ◇ finally, at top-left click 'share,' make it public and send me a link

## add colleges

- ◇ load our favorite colleges into qgis
- ◇ [https://sites.google.com/site/adamokuliczkozaryn/gis\\_int/hsip\\_colleges.zip?attredirects=0&d=1](https://sites.google.com/site/adamokuliczkozaryn/gis_int/hsip_colleges.zip?attredirects=0&d=1)
- ◇ MMQGIS-Import/Export-Google Maps KML Export
- ◇ and load into google maps
- ◇ can change style of placemarkers to something fancy
- ◇ first change 'Individual styles' to 'Uniform style'
- and on the right click a 'bucket icon' and 'More icons'

# that's it...

- ◇ please play with google maps
- ◇ it should be pretty straightforward and user-friendly

## outline

google.com/mymaps (almost like qgis!)

other online mapping options

## many options

- ◇ there are dozens of ways to make maps online
- ◇ even per google there are many ways to do it
- ◇ feel free to experiment and play around
- ◇ i am curious about your impressions
- ◇ especially if you find out something great, do let us know!

## fusion tables

◇ can use Google's fusion tables

- https:

- [//support.google.com/fusiontables/answer/2571232?hl=en](https://support.google.com/fusiontables/answer/2571232?hl=en)

- more powerful in a sense that allows more data, obs, vars

- and can customize it using some java

◇ but less clear, i think

- and doesn't seem to work the way you want it to work

◇ but i am curious about your impressions

## mapbox and open map

- ◇ mapbox and open map seems like a good alternative to google
- ◇ <https://www.mapbox.com/about/maps/>
- ◇ example: <http://www.wnyc.org/story/273686-mega-commuters-take-manhattan/>

◇ <http://michaelminn.com/linux/mmqgis/>

◇ <https://medium.com/@tjukanov/>

[geogiffery-in-a-nutshell-introduction-to-qgis-time-manag](#)

## combine layers

- ◇ mmqgis-combine-merge layers (need to be same type: polygon, line, point)

## mmqgis more

- ◇ there is much more !
- ◇ just explore menu

## combining layers

- ◇ there was a question about how to combine layers
- ◇ mmqgis-combine-merge layers
  - just make sure all are same type (polygon, line, point)
- ◇ more info on combining layers: <http://gis.stackexchange.com/questions/25061/how-to-merge-multiple-layers-to-one-layer-using-qgis>
  - <http://www.statsilk.com/maps/merge-multiple-map-layers-single-shapefile-using-quantum-gis>
  - <http://www.igismap.com/merge-two-shapefile-qgis/>
