

Colombia—Unlivable but Happy—Fool’s Paradise?

Saturday 12th November, 2022 17:38

Colombia is the happiest country in the world or one of several very happiest, depending on measurement. **have like a ch on it like one marx too; ya so do have couple para on livability, and argue that dont need much to satisfy human needs, so ya livability theory holds** At the same time it is apparently unlivable—by Western standards—it's poor, corrupt, dangerous, and roads and ports are bad, too. But economy, institutions, and physical infrastructure is not all that counts for livability and happiness. Notably, excellent wealth and physical infrastructure such as that in richest parts of the US or Germany or Hong Kong not only is not needed for livability and happiness but may actually decrease them by having to overwork and by making environment unhuman, sanitized, hospital, or airport-like. Arguably the solution of the apparent paradox of unlivability but happiness is that the good outweighs the bad—Colombia is very happy because it is actually very livable. Yet another possibility is indeed that ignorance is the bliss or that it is fool’s paradise. More research is needed. Regardless, this paper argues that Colombia is one of the very best countries to visit, and it may even be one of best places to live.

Happiness and Place in Colombia: Urban-Rural and Regional patterns from World Values Survey (WVS)

preliminary evidence especially regarding regional differences—small sample, need more evidence using more data as data becomes available in the future

only apparently great happiness is possible in unlivable conditions! BUT what matters for livability is not only gdp, kkk, roads, etc; social capital—Rt so col is livable!! Stuff like gdp governance roads not most important, social stuff is the key and stressless spontaneous attitude like from Marcuse

DEGROWTH

Colombia is the very happiest or at least one of a handful happiest countries in the World (e.g., ?). It ranks among top 3 as in table 1.

Colombia was ravaged by largest civil conflict in Latin America and drug-trafficking related violence in 80s and 90s (?).

Table 1: 23 happiest countries in the world. Data from World Database of Happiness at <https://worlddatabaseofhappiness.eur.nl/rank-reports/satisfaction-with-life/> and https://worlddatabaseofhappiness-archive.eur.nl/hap_nat/desc_na_genpublic.php?cntry=122.

happiness rank	country	happiness (1-10)
1	Denmark	8.2
2	Mexico	8.1
3	Colombia	8.1
4	Switzerland	8
5	Finland	8
6	Iceland	8
7	Costa Rica	7.9
8	Norway	7.9
9	Canada	7.9
10	Qatar	7.8
11	Sweden	7.8
12	Austria	7.7
13	Nicaragua	7.7
14	Uzbekistan	7.7
15	Netherlands	7.6
16	Ecuador	7.6
17	Israel	7.6
18	Luxembourg	7.6
19	Belgium	7.5
20	United Arab Emirate	7.5
21	Bosnia Herzegovina	7.5
22	Panama	7.5
23	Brazil	7.4

i guess mv table 1 just right next to table 2 so they are right next to each other for contrast!

have first across space v other countries—paradox and then over time—another paradox—it improved a ton, but swb flat or decreased—and a lot of theory—livability etc; ; AND argue sth like easterlin paradox! so ya maybe have that one reg table and show that swb flat or if anything dropped; and similarly to table enumerating qol show over time great progress; ya so 2 main sections static now and dynamic 2000-2020; like GDP per cap and PPP; kkz; etc etc

In first panel of table 1 Colombian happiness skyrocketed from about 2.5 in 1997-2000 to about 3.3-3.4 only few years later in 2004 and remained mostly within 3.3-3.4 range ever since. An increase of about 1 on 1-4 SWB scale for a country within just few years if not unprecedented, is clearly an outstanding feat. Likewise, in second panel of table 1 Colombia shines. The happiest countries are either very most developed, rich and equal or rather poor and very unequal Latin countries. Still, Colombia is happier than all other Latin countries and about as happy as Mexico, but Colombia is significantly poorer than Mexico, at least 25% poorer either in nominal or PPP terms¹

over time big improvement from around 2.5 in late 90s to around 3.35 in late 2010s, 34 percent improvement, perhaps can be explained that in 80s and early 90s colombia experienced much violence, and by late 90s became much safer, so Colombians became happier. massive increase in happiness since 90s is arguably because conditions improve so much! Even though they are still relatively bad as compared to other countries, they are really much better than in 90s. So rather MDT, Colombians may be very happy because compare to what it used to be. As per livability theory it is a paradox, relatively bad conditions as compared to other countries and happy.²

¹[https://en.wikipedia.org/wiki/List_of_countries_by_GDP_\(nominal\)_per_capita](https://en.wikipedia.org/wiki/List_of_countries_by_GDP_(nominal)_per_capita)
[https://en.wikipedia.org/wiki/List_of_countries_by_GDP_\(PPP\)_per_capita](https://en.wikipedia.org/wiki/List_of_countries_by_GDP_(PPP)_per_capita)

²Also note that neighboring countries, Ecuador and Panama saw similar staggering increases over the same period of time: https://worlddatabaseofhappiness-archive.eur.nl/hap_nat/nat_fp.php?cntry=127&mode=3&subjects=29&publics=5 and https://worlddatabaseofhappiness-archive.eur.nl/hap_nat/nat_fp.php?cntry=86&mode=3&subjects=28&publics=1—we leave for the future research as we focus on Colombia, and we are less familiar with Panama and Ecuador.

happiness of above 8, even like 8.5! this is huge! a trully outstanding score

top 10 countries just costa rica and colombia from latin america, and colombia poorer than costa rica; Colombia is a trully outstanding case of achieving world's highest happiness at low development level

asymmetric low-intensity armed conflict between government forces, leftist guerrilla groups and right wing paramilitaries. The conflict escalated in the 1990s mainly in remote rural areas. Since the beginning of the armed conflict, human rights defenders have fought for the respect for human rights, despite staggering opposition. Several guerrillas' organizations decided to demobilize after peace negotiations in 1989-1994.

The administration of President Alvaro Uribe (2002-10), adopted the democratic security policy which included an integrated counterterrorism and counterinsurgency campaign. The Government economic plan also promoted confidence in investors. As part of a controversial peace process the AUC (right wing paramilitaries) as a formal organization had ceased to function. In February 2008, millions of Colombians demonstrated against FARC and other outlawed groups.

the Colombian government of President Juan Manuel Santos and the guerrillas of the FARC-EP announced a final agreement to end the conflict. the Colombian government and the FARC signed a revised peace deal in November 2016. In 2016, President Santos was awarded the Nobel Peace Prize. The Government began a process of attention and comprehensive reparation for victims of conflict. Colombia shows modest progress in the struggle to defend human rights, as expressed by HRW.

In June 2018, Ivan Duque, the candidate of the right-wing Democratic Center party, won the presidential election. Protests started on 28 April 2021 when the government proposed a tax bill which would greatly expand the range of the 19 percent value added tax.
so we focus on the aftermath—how's colombia doing in the last 20 years 2000-2020

1 QOL v SWB

Colombia is a social indicators v happiness puzzle. It scores low on most social indicators, but tops rankings of both global overall cognitive life satisfaction and momentary affective happiness. In other words it is unlivable but happy, hence so called "Fool's Paradise," a place where people are subectively happy, despite objective misery (?)—for other examples of fool's paradise and fool's hell see ?.

Colombia has an extraordinarily grim objective indicators of quality of life or very poor livability—for a list see table 2.

Table 2: Objective indicators of quality of life or livability v subjective wellbeing or life satisfaction.

Value	Indicator	Source
2019 poverty (national benchmark)	42%	https://data.worldbank.org/indicator/SI.POV.NAHC?locations=CO
2011 median daily income/cap PPP USD	\$7	https://www.pewresearch.org/fact-tank/2015/09/23/seven-in-ten-people-globally-live-on-10-or-less-per-day/
2019 percent on <\$5.5/day	30%	https://data.worldbank.org/indicator/SI.POV.UMIC?locations=CO
2017 R/P 10%	40	https://data.worldbank.org/indicator/SI.DST.10TH.10
2020 unemployment rate	15%	https://data.worldbank.org/indicator/SL.UEM.TOTL.ZS?locations=CO
2020 freedom rank	96/210	https://freedomhouse.org/countries/freedom-world/scores
2021 corruption rank	87/180	https://www.transparency.org/en/cpi/2021/index/col
2020 political stability, no violence/terrorism pctile	20th	https://info.worldbank.org/governance/wgi/Home/Reports
2020 rule of law pctile	34th	https://info.worldbank.org/governance/wgi/Home/Reports
2021 working conditions decile	bottom decile	https://www.globalrightsindex.org/en/2021/countries/col
2018 quality of roads rank	110/137	https://reports.weforum.org/pdf/gci-2017-2018-scorecard/WEF_GCI_2017_2018_Scorecard_EOSQ057.pdf
2010-2019 average life satisfaction rank	3/160	https://worlddatabaseofhappiness.eur.nl/rank-reports/satisfaction-with-life/

And may see for additional indicators appendix: World Economic Forum report.

Poverty (national benchmark) is at 42%—the whole nation has a higher poverty rate than one of the poorest cities in the US, Camden NJ, at 36%³ Median daily per capita income in PPP in 2011 was at \$7 (US was at \$56). Likewise about a third of Colombians live on less than \$5.50 a day in 2019, but strikingly, that's a progress, it is down from about 2/3 of Colombians in 2000! The ratio of the average income of the richest 10% to the poorest 10%

³Camden also rated using a national poverty benchmark <https://www.census.gov/quickfacts/camdennewjersey>.

(R/P 10%)—Colombia ranks 3rd out of 70 at a whooping 40–top decile of Colombians makes on average 40x the average for the poorest decile; even greater disparity than in the unequal US at 30. Unemployment rate is at 15%, with informal labor at about 50% of the workforce (cited in ?).⁴ All of that, notably precarious labor, poverty, and inequality should lead to unhappiness. Notably inequality is associated with a multitude of negative outcomes (?).⁵ Specifically in Latin America, inequality was found to have negative effects on happiness as it seems to be a signal of persistent unfairness (?).

Colombia is still being haunted by violence in conflict, much of which is rural (lina cite??), and so in that respect it is notable that rural is happier than urban.

Colombia is only partly free ranked at 96/210 Colombia is a corrupt country ranking 87/180 on Corruption Perceptions Index.

Political stability and absence of violence and terrorism—is only 20th percentile —Colombia is less stable and more violent than 80 percent of the countries. Voice and accountability and governemnt effectivness and control of corruption are at around median, Colombia scores best at Regulatory Quality better than about 2/3 of countries, and Rule of Law is problematic—below about 2/3 of countries.

Colombia is one of the 10 worst countries in the world for working people: Murders and impunity, union-busting and dismissals. This is one of the most troubling statistics as it involves clear violations of human rights.

In terms of quality of roads colombia ranks 110/137—part of the problem is mountains, yet roads are precarious as one of the authors of the study found out when his bus crashed—roads are not only a basis for commerce and trade but also for everyday getting around, especially in absence of rail. (Singapore scores 2nd).

And finally life satisfaction is at 8.1 (3rd out of 160 countries after Denmark at 8.2 and Mexico at 8.1)

An useful counterexample for Colombia could be “fool’s hell”—a place that has high objective quality of life or livability, but low subjective wellbeing or life satisfaction. Singapore, by many standards, one of the best, if not the best place in the World. It has World’s third highest (after Qatar and Luxembourg) Gross Domestic Product per Capita Purchasing Power Parity adjusted (?). It has also third highest (after Monaco and Japan) life expectancy in the World (?), second highest economic freedom (?). Singaporean children score highest on educational tests (?), it is making greatest progress in health (?), has the World’s fastest internet (?). It even has world’s strongest passport (?). In short, one could say that Singapore is one of most livable places in the World, if not the very most livable in the World. Singapre’s life satisfaction rank is 68/160, again, Colombia is 3/160. This is one of the most striking paradoxes in the social indicators field—given poor or average objective quality of life indicators, Colombia is an extremely happy country. How?

really Colombia better than Singapore? discuss more!! maybe even subchapter on singapore

Colombia is one of the happiest countries in the world, or indeed the happiest (?). Colombia scores in top decile in terms of life satisfaction (Scandinavia tops the rankings) Yet in terms of emotions and daily life experience: smiling and laughter, respect, enjoyment, worry, sadness and anger: positive daily experiences and emotions, the top countries are: Colombia, El Salvador, and Guatemala. Of the 10 countries that rank highest on positive experiences, 7 are Latin Americam (?). Colombians seem to have warm, welcoming, and unshakable spirit; and they appear resilient—grateful, satisfied, optimistic, lucky, and even innocent (?).

So is Colombia “Unlivable” but “Happy,” a so called Fool’s Paradise ?? Arguably not. Colombia is a genuinely wonderful place to be as many locals, travelers and tourists would attest (e.g., ??), and so is Cali THAT WASHINGTON POST OR NYT BETH REFERRD AND GUESS MANBY AOTHERS elaborate on affect, momentary happiness as per that huffpost; and add washington post i think—that col is the very happiest!!!

This is not to say that the objective problems, notably violations of human rights, are not important and don’t need to be addressed.

It may be resilience, positive outlook, ability to make out most of little, deeply social society’s fabric.

The chasm between objective quality of life or livability and subjective wellbeing may point to limitations of livability theory CITE. Or perhaps alternatively, there are aspects of objective quality of life and livability that are not captured by usual rankings such as those cited above. Notably, nature is extraordinary in Colombia. Colombia has 2nd largest biodiversity (after Brazil), despite being 7x smaller than Brazil. Colombia has just about any type of natural amenities. And we know that nature (as opposed to cities) is the key ingredient for happiness PRETTY earth only endures, tesson, walden

Another key to happiness is social capital PUTNAM BOWLING ALONE LANE mwerket demcoracies MCMAHON history TOENIES, and thgere is plenty of social Capital in colombia—Colombians are extraordinarily social, firendly, outgoing and sponatenous, there are festivals and social events vbery frequently.

freedom from (negative)[objective]: be no slave, live in a free country, have no coercion, free from restrictions/impediments; lack of obstacles FH freedom to (positive)[subjective]: be able to choose, control and direct one’s own life; presence of control WVS eg US more objectively free in than MEX but MEX actually feeling more free than US (give numbers for both)!! (??)

world avg from wvs 1981-2020: 6.9 .25

COL 8.0 0.1

Another explanation for the columian paradox of high subjective wellbeing despite objective poverty is adaptation BRICKMAN—humans are able to adapt to just about anything—then perhaps columbians have adapted, at least to some degree, to poverty, inequility, and even violence having suffered through recent civil war and breakdown of the state, now that things are better than they used to be just few decades ago, columbians are making best out of the conditions.

⁴Colombia has a high prevalance of informal work above 50% and workers in informal sector are less happy (?).

⁵But see criticism ?

So while presumably many Colombians would like to move to USA and not many Americans would like to move to Colombia, it should be noted that indeed many westerners from better objective conditions do move to Colombia FIND SOME CITES

this background information and further elaboration is beyond the scope of this paper focusing in Happiness within Colombia across space

1

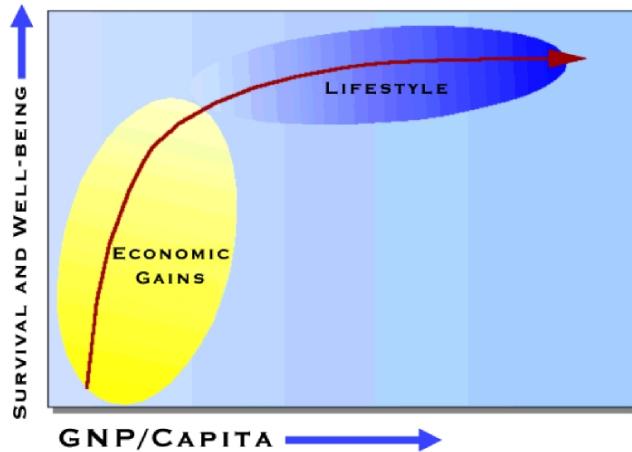

Figure 1: Well-being and income, (?).

Colombia has one large city, Bogota, at about 8m, Medellin and Cali are at about 2.5m, and Baranquilla and Cartagena at about 1m, and about 7 cities .5-1m.

Then it makes sense that Bogota is a category on its own, and likewise medellin and cali should be separated out and this is how we will proceed

Bogota doesn't feel like Colombia, it feels like a western city, rushed and stressed

Only about 20% of Colombia population is rural, similar to the US, <https://data.worldbank.org/indicator/SP.URB.TOTL.IN.ZS?locations=CO> <https://data.worldbank.org/indicator/SP.URB.TOTL.IN.ZS?locations=US> Yet the UN/WB definition has urban-rural cutoff very low, if looking at medium and large cities >.5m v elsewhere, only about 20m out of about 50m colombian population live there, less than half.

THEORY:

the folklore theory defines happiness in terms of the reflection of broadly held perceptions about life which are rooted in traditions and the culture of a country. For example, if a society has a pessimistic outlook on life, generations to come might hold the same beliefs even if the situation in their country has improved. Nevertheless, if a culture has an optimistic outlook in life regardless of their circumstances, future generations will remain positive. This Thus, through the folklore theory one can predict that Paraguayans will be happier, regardless of the socioeconomic situations the country has gone through, because of cultural influences (?).

2 QOL v SWB

add from my livability paper

3 Data and methods; REPHRAZE! copied from earlier

Here we focus on 20 year span.

We use www.worldvaluessurvey.org, which is representative of about 90% of the world population,⁶ and as elaborated in previous section, is much better suited for the study than an inadequate and poorly designed Gallup data. The variables are listed in table ???. Country codes and descriptive statistics are in SOM (Supplementary Online Material).

SWB question reads "All things considered, how satisfied are you with your life as a whole these days? Using this card on which 1 means you are "completely dissatisfied" and 10 means you are "completely satisfied" where would you put your satisfaction with your life as a whole?"

Urbanicity is operationalized with WVS variable X049—note that it is objective and recorded by reviewer, not respondent. There are eight categories ranging from '< 2k' to '> 500k.' This is important advantage, because as elaborated earlier, urbanicity or urbanness is a continuum, not a binary urban v rural. We conduct the analysis using a set of dummy variables for all eight categories (leaving out the base case) in the SOM. However, for simplicity and ease

⁶While WVS is conducted in about 100 countries that represent about 90% of the world population, due to missing data for the particular variables of interest, the present's study coverage is slightly smaller, about 70 countries (depending on the model and specification).

of exposition we present simplified results in the body of the paper using three categories only. In other words, this study will use 8 categories of urbanicity, and summarize results for ease of presentation with 3 categories.

Because in many countries, there are either no observations or few observations in the first two bottom categories –2k and 2–5k, we combine them together for the analyses in the main body of the paper. These two categories together proxy free of city natural environment most closely resembling human natural habitat where we have evolved, and it includes: wilderness, open country, and small villages. The other critical category that must be measured based on earlier review of theory is large cities, again, there is likely to be a threshold at several hundred thousand, hence we use the top category on WVS variable X049 '>500k' to proxy large cities. Such places, are the least resembling of human natural habitat and are mostly consisting of man made objects such as asphalt, concrete, glass, etc, and as per theory as reviewed earlier, are likely to be least happy. The third category in our main analyses are places in between, 5–500k.

wvs boilerplate (bash gallup) and ols boilerplate

As ? put it, it's not happiness research, it's "happiness industry." There are multiple problems with Gallup data. First, it is not meant for research but for commerce—Gallup charges \$30,000 for access (per one year!). (author's email inquiry)

—private corporations are making fortune from tax dollars and students tuition—scholars should resist corporatization of academia (?????), and corporatization of happiness research (?).

Second, urbanicity classification is twofold less precise than in WVS: 4 v 8 categories. Third, while WVS uses precise population size numeric cutoffs, Gallup uses fuzzy concepts such as "rural area", "small town or village", "large city". Fourth, (and this compounds third problem) Gallup uses self-reports of urbanicity, which is highly subjective and problematic in this case—many, if not most people, would likely classify themselves completely arbitrarily into "rural area" v "village" and so forth. WVS uses interviewer's information about the place. Fifth, apparently much of data are missing—? notes that in 14 countries "rural area" responses were exceptionally low. Also, about half of the world population is urban, but ? reports that in their dataset only about quarter of respondents report rural residence.

Table ?? lists control variables used in the body of the paper.

In choice of controls we generally follow (?). There are specific controls worth discussing. Young, single and childless persons and young men with tertiary education are relatively more satisfied with urban areas as place of residence (?). Income, class, and education are important controls—not only predict greater SWB, but are also confounded and higher in cities.⁷

One great advantage of city living that is often forgotten is freedom "City air makes men free (Stadt Luft macht frei)" ?, p. 12⁸, hence we control for freedom.

Likewise, trust is important, it predicts SWB, and it is lower in cities (?).

Health is a key predictor of SWB, and also note that subjective health measure used here is a reasonable measure of actual health (?).

We use a standard OLS regression with robust standard errors. We treat the 10-step happiness variable as continuous. Ordinal happiness can be treated as a continuous variable (?). OLS has become the default method in happiness research (?). Theoretically, while there is still debate about the cardinality of SWB, there are strong arguments to treat it as a cardinal variable (??).

4 Results

these stats from table 1 over 20yr period

focus on over time and yr * sociodemographics interactions (if any significant)—who got less happy over time

first show raw as below then margins like in joanie more unequal in income, more unequal in wellbeing

```
. tabstat ls, stat(count mean sd) by(yr) format(%9.1f)
tabstat ls, stat(count mean sd) by(yr) format(%9.1f)
```

Summary for variables: ls
by categories of: yr (Year survey)

yr	N	mean	sd
1997	3009.0	8.2	2.3
1998	2995.0	8.4	1.7
2005	3018.0	8.3	1.9
2012	1512.0	8.4	1.8
2018	1520.0	8.2	2.2
Total	12054.0	8.3	2.0

swb flat—but given enormous improvement in QOL these should be increasing

⁷where i discuss controls in data and to literature where i slam burger and indeed as shown later comparing unadjusted means results in cities being happier notably due to confounding of higher income education and class—see appendix for tables with and without controls

⁸It originated in the Middle Ages, and it meant freedom from feudalism, non-feudal islands in a sea of feudalism (?).

5 Discussion and Conclusion

Despite all the problems with poverty, roads, corruption, etc as enumerated at the beginning in 2, Colombia actually seems to be quite a livable place.

But 2 points to problems in terms of metrics that are mostly economic, some legal/institutions, and physical infrastructure. But these things are not the only things that matter⁹ there are other things that matter for human flourishing or happiness.

and in fact the more focus on economy, the less human firmly the place is—marx sec on alienation

It has wonderful nature, extremely good energy, cheerful welcoming people, and so forth. *iii* these washington post hufington post etc here

Colombia is a wonderful place, it has everything: Pacific, Caribbean, jungle, desert, mountains, you name it, like Lat Am in one country, 2nd greatest biodiversity in the world so it is striking that according to WEF in terms of Prioritization of Travel & Tourism colombia ranks 97th out of 136 countries (?). Given that its air transport infrastructure is good 60th, but Ground and Port Infrastructure bad 116th. And Safety and Security 136th/136—surely Colombia should work to improve safety, but much progress has already been done, and it is important to point out that much of the country is safe, and dangerous colombia is more of a stigma of the past than present reality.

iii

!!!as per fool paradise question in the title: no, wonderful place, yes, poor, but not only material things matter for livability

The concept of fool's paradise is related to the concept of 'ignorance is a bliss,' and there may be a grain of truth there. if anything ignorance is a bliss—colombians may not know about good life, especially those in poor and isolated areas

inhabitants of poor municipalities in the Choco are happy to know only that environment in which they were born and raised, but when they know and live in other municipalities with greater socio-economic development their demands and expectations increase (?).

many poor may be relatively segregated and isolated into their neighborhoods, not knowing better, and thus being satisfied with little what they have. Similarly, to women in rural China, who only became unhappy once they became exposed to higher standard of living (?).

⁹As long as the problems are not extreme, and in Colombia they sometimes are. For instance, mediocre or relatively poor road condition does not hamper human flourishing much, but extremely bad condition such as falling bridge does create great unhappiness. Same with poverty—one can live happily on very little, indeed be poor by western standards, without hot water, without car, etc, but abject poverty such as malnutrition does create great unhappiness. There is considerable abject poverty in Colombia, and no amount of nature, festivals, or cheerfulness can help with it.

Curiously, ? reports that in Cali residents in the poorest districts were more satisfied with their lives, and speculates that it may be so due to the high resilience of this population being affected by crime, poor health, and insufficient provision of public goods. Here it may be similar, country was ravaged by largest civil conflict in Latin America and drug-trafficking related violence in 80s and 90s (?), and now while still poor and unsafe as compared to West, much better than 230 or 0 years ago; and what it went through might have made it resilient

There is obviously large migration from Latin America to the US, and surely more people want to come to the US than leave it, but this doesn't mean that the US is the best place to live—people mostly come to the US for the money, not necessarily for quality of life.

Indeed recent media reports argue the opposite—people are leaving the US for Latin America for better quality of life there, e.g. Californians and others moving to Mexico; and anecdotal evidence—many Americans fall in love with Colombia

Future research can perhaps use MLM to include country level variables, now with only 3 or 4 waves, there is not enough time variability to test these variables statistically

TODO: have separate som-r.tex as opposed to having it below; and in paper say see supplementary material as opposed to see appendix!

ONLINE APPENDIX

The US v Colombia in Pictures

The point is that the apparent economic or even livability superiority of the US over Colombia actually is only economic—more expensive physical infrastructure doesn't make it more livable and actually can make it less livable.

It is often overlooked point that something less developed economically and cheaper is actually better (happier).

The US infrastructure is great for business or making money, but it is bad for living there. It could be a difficult tradeoff to solve: economic growth v. wellbeing, except that a very convincing argument has already been made that we do not need any more economic growth Kallis

Some inspiration comes from ?—the idea is that what matters when travelling is not only speed and distance.

US has this strange obsession with excellence/perfection and productivity, also in terms of built environment apparently thinking that the more ordered, organized, and man-made, the better. But the thinking was not always this way. Thoreau, for instance, was an American (?).

The following are one of the author's own subjective/anecdotal opinions. Note when picking images I dropped the Google's yellow man more or less randomly only given rural, urban, suburb, toll, etc and took first useful image. I tried to avoid cherry picking positive and negative imagery. Comments welcomed! Contact the corresponding author.

In Fig 2 obvious difference is width or 6 v 2 lanes, and economically 6 beats 2—can move more stuff faster, but assuming the same traffic, it is more interesting and fun or joy to ride on smaller roads.¹⁰ The other less obvious difference is vegetation—around I-95 it is pedigreed nicely trimmed man-made fake nature; around 25 it is real wild nature—more happiness there too.

Keep in mind that 25 is not some small rural road—it's one of the most major ones, the Pan Americana.

¹¹.

have captions and/or in text: like robotic/alien-like v human

¹²

Fig 3 here we are passing through towns—on 295 through Cherry Hill, but who would have noticed looks the same as I-95 in previous picture, whether rural or urban, there's the same fake nature on the side.

Fig 4 Approaching Del Mem Br toll—looks unwelcoming, like an entrance to minimum security prison. Peaje on 25 looks better, again natural wild vegetation, can pull over and rest a bit, buy an organic orange.

In Fig 5 even toll booth looks more human in Colombia, a friendlier more welcoming place, the one in the US looks like entrance to a minimum security prison

Last but not least let's hang out in a city, in Fig 6 Say you are a weary traveller arriving at 30th St station in Philly. You get out of the station, and it's a desert—nowhere to hangout, have to keep walking. You arrive to Terminal de Transporte in Cali, get out of the building and plenty of places to buy food, drinks, and sit down.

Fig 2:

¹⁰ And adding more lanes does not automatically mean less traffic, often on the contrary, people decide to drive more—adding more lanes for traffic is like loosening your belt for obesity (e.g., ?).

¹¹ And why not more fun highway, say from rural mountainous TN? Because the contrast is for the flat, dense, developed and wealthy North East—that's where economic productivity thrives

¹² 295 not NJ Turnpike, to be conservative, NJ Turnpike is even more fake
