first rough draft of the final project; due in 3 weeks, oct29

[version: Wednesday 2nd October, 2024 09:56]

- 1. Develop your research ideas—as with final presentation—it may be either your own research, or critique of others' research or both (be upfront, say explicitly if you just do lit rev; or conduct actual study).
- 2. Build on ps1, take into account comments I gave you.
- 3. Be specific: Narrow down to something manageable. Focus on key research questions, data used, significance.
- 4. Start with literature review https://scholar.google.com—this takes time!
- 5. Have some discussion of research design (res_des.pdf: we covered few slides in the first class and will cover the rest in the second half of the class).
- 6. Important: this is not an outline (like ps1) anymore—it must have some substantive meaningful matter!
- 7. Think of it as a first rough draft of your final project; the more developed it is and the more it resembles the final project, the better.
- 8. ideally, especially if doing only lit rev, have 50+ studies, again, dont have to read everything, just skim through abstract, summary, discussion, and conclusion; but do have a handful that you do read carefully even several times
- 9. important! do sell your study well! how/why is it new, important, useful? how you're contributing to the literature? what's your value added?
- 10. (note: as final project (ps) is a presentation, this can be a draft of presentation as well (ie just slides), while you will present 5-7 slides, no more than 10, there can be an appendix with extra info

general directions (always the same):

- ps is due in Canvass by the beginning of the class
- \bullet keep it short; max: 5 single spaced pages; typically way less, say 1 or 2
- if you are stuck, email me early! also email if you want some feedback and make sure you are on the right track, etc
- show your work, a "naked" number won't do! unless indicated otherwise, always do calculations by hand
- likewise, numbers should be interpreted—we are not only interested in calculating values of interest, but we are interested in their meaning! whenever you calculate your final quantity if interest, interpret it!
- if your handwriting is bad, please type
- i may want to discuss your assignment in class, which should be beneficial to you and give you more feedback; if however, you'd like to keep it private, let me know!
- numbers in brackets are relative importance of each item for grading; adds up to 10
