Very Quick Introduction, Quick Look at Data, Discussion of Your Happiness Research

Adam Okulicz-Kozaryn

<u>outline</u>

intro

quick data

discussion

- first go over syllabus
- then these slides here
- and then, once we have basic idea about the class
- owe'll do lengthy introduction of ourselves
- o and discussion for the reminder of tonight

<u>outline</u>

intro

quick data

discussion

intro 4/15

setup

• no pre-requisites, but we will go as fast as possible

• want this to be more conversation than lecture

do interrupt me and ask questions

intro 5/15

disclaimer: but wait, there are bad news :(

- i teach it for the first time
- it will be intensive—i will assign a lot of work
- o make sure you set aside plenty of time
- odo ask questions often:
 - i tend to be overly parsimonious but i respond fast to emails asking questions early is important for your success!

intro 6/15

today

- we'll do proper intro to the topic next week
- today just very quick intro
- and quick overview of data,
- oso that you can get going with research from day 1
- ideally we'll figure out, or at least get closer
- o to what you want to study in this class:)
- but first some super basic things

intro 7/15

happiness, what is it?

- super-interdisciplinary; in this class:
- o social psychology, geography, and sociology
- it's a cognitive evaluation of one's life as a whole
- o not domain (say neighb, financial satisfactions)
- not affective (happy at a moment)
- so technically properly called "life satisfaction"
- but typically used interchangeably with
- o "happiness", and there is also a scientific term
- SWB: Subjective Wellbeing

intro 8/15

how do we study it?

a typical survey question reads:

- typically in this class and in my world:
- o if you cannot measure it with numbers, you cannot study it
- and there is no point collecting data, because it already has been collected!
- "are you satisfied with your life as a whole"
- o and is answered on a Likert scale say from 1 to 5 or 1 to 10
- oit's reasonably valid/reliable
- and the we regress it on what we're interested in
 say age, education, income, inequality, poverty, etc

intro

quick data

discussion

quick data 10/15

if you cannot measure it, it doesn't exist

- depending on your research interests and skills, get familiar with at least one dataset from the next slide
- o (i use them and can also share with you my Stata code)
- o ie download it and play with it, read literature using it, eg google scholar "happiness, general social survey"

quick data 11/15

the datasets (more coming later)difficult but comprehensive containing almost everything panels (need to be great with data management):

https://psidonline.isr.umich.edu/, https://www.icpsr.umich.edu/icpsrweb/content/DSDR/ add-health-data-guide.html and https://www.icpsr.umich.

edu/icpsrweb/ICPSR/studies/21600/datadocumentation

http://www.worldvaluessurvey.org/wvs.jsp

• user friendly but still comprehensive cross sections:

- http://gss.norc.org/
- interested in communities/localities, ie counties? use brfss! http://cdc.gov/brfss

want to use any other data? interested in anything specific? let me know!

quick data 12/15

outline

intro

quick data

discussion

discussion 13/15

this will be a great class!

- you'll become happier (really)
- because this is my area of research
- so i know a lot here
- and we can publish something together
- o i want to spend on this much time and have discussion like 30min
- o so that we can start figuring out collaborations asap
- first check out my research, and then each of you discuss yours theaok.github.io

discussion 14/15

2 questions about you

- what do you study or want to study?
- o (we'll be able to link just about anything to SWB)
- what data are you using or want to use?
- o (i am a "quant," and it's better if you are too)

discussion 15/15
