discussion of ps1

discussion of ps1

publish or perish

- again, the goal of this class is to write a publishable paper
- to this end, we will be spending much of class time on that
- we will be discussing our papers
- and i will be increasingly focusing on co-writing these papers with you
- what follows is a general discussion of ps1

discussion of ps1 4/38

the literature

- usually literature points to data!
- google scholar your paper's title and/or keywords, eg for Shibin:
- ohttps://scholar.google.com/scholar?hl=en&as_ sdt=0%2C31&q=Social+capital+and+subjective+ well-being+among+the+elderly+in+China&btnG=
- ohttps:

```
//scholar.google.com/scholar?hl=en&as_sdt=0%
2C31&q=SWB%2C+social+capital%2C+china&btnG=
```

othen also see who cites key papers

discussion of ps1 5/38

data analysis

- now i realize that many of you may not be very advanced with data
- so i have started data analysis for you; just go to:
- •http://father.us.to:9999/tree/happiness-class
- o password is: ????
- oif off-campus
- o would need to run it within apps.rutgers.edu
- and go to the notebook under your name
- it's mostly gss: http://gss.norc.org/
- lets have a look at some notebooks, esp Alyssa, Kiersten

discussion of ps1 6/38

Cloutier (2nd week) and other specific studies about neighbourhoods

levels 7/

levels of analysis and theorizing

- initial classes were mostly about persons or societies (countries or regions/provinces)
 the previous class (public policy) is also mostly about
- societies (countries or regions/provinces)

 societies and regions are made of localities

(still, keep in mind that not always the whole is a simple

- sum of parts)
 the so called atomistic and ecological fallacies
 idea is simple:
 Rutgers is a good university, hence you guys are good
- students

 You are good students, hence Rutgers is a good university.

ecological fallacy

levels

- it happens when you make conclusions about individual units based on group data, eg:
- on vacation in Hawaii you meet a person from Camden
- o and you think: "she must be a criminal"
- o that Camden has the highest crime rate in the US does not mean that everybody in Camden is a criminal
- now say, you meet a person that graduated from Harvard o and you think "she must be a genius"
- o again, just because Harvard is ranked as a best university does not mean that every Harvard graduate is a genius
- http://www.socialresearchmethods.net/kb/fallacy.php

atomistic fallacy

- an opposite of ecological fallacy
- making inferences about groups based on individual data
- e.g. you found that rising individual income reduces risk of coronary heart disease (e.g. people stress out that they are relatively poor, they are missing out...)
- but it does not mean that increasing incomes of states would decrease coronary disease rate for a state ...
- http://www.paho.org/english/dd/ais/be_v24n3-multilevel.htm

levels 10/38

community development≈city/neighb development

- most of community development is about cities
- over 80 % of the US population is urban
- even more of production, R&D and innovation is urban
- we will have several classes about cities

levels 11/38

<u>outline</u>

discussion of ps1

levels

"hard" community development: \$ amounts

"soft" development: "community development" (Green and Haines, 2012)

Campbell chapter on community

Cloutier (2nd week) and other specific studies about neighbourhoods

"soft" v "hard" development

- again, as per previous (policy) class
- o now development is becoming about SWB
- obut also about other things, eg:
- o social capital, engagement, community
- ofreedom, self-expression, self-realization
- o equality (income, gender, race, etc)
- but development used to be, and still largely is
- o about GDP (and jobs, consumption, etc), \$ amounts
- othis thinking comes from Smith, Friedman, Becker
- and others of
 neoclassical capitalistic free market leissez fair economics

A Smith: "invisible market hand" and specialization

- oversimplifying: pub pol/adm should barely exist
- o because market regulates itself
 http://tutor2u.net/economics/gcse/images/demand_supply_
 - http://www.pcecon.com/notes/noteimages/equilibrium/incrdemsup2.jpg
- division of labor: just do one thing:
- you get better at it, and can do it fasterpin factory
- but less creativity, numbness, alienation, anomie
- Smith lived in 18th century...had he lived now he could put it differently ... (see also Milton Friedman)

excess_demand1.gif

division of labor is great!

- still, division of labor is a must!
- think about it...
- you cannot produce everything you need yourself
- even simple stuff, like a pen, or a car seat
- you're better off doing whatever you do, getting paid for it
- and paying other people for other things
- everyday things like a car, a train
 - -think how many people worked on them

problems with division of labor

- you become like an automated machine, and you don't get the whole picture
- in research, too
- eg in medical research people work on very specific specialized tasks
- specialized tasksthe research teams are big: dozens or hundreds of people
- and then the PI, who is more of a manager than a scientist,
 puts everything together and gets credit
- we still need great specialization to push research forward
 but at the same time we need interdisciplinary people with broad (but shallow knowledge)

neoclassical economic theory (M. Friedman)

- also called "the invisible hand", based on Adam Smith
- equilibrium of economic systems
- mobility of capital
- if capital can flow without restrictions, all economic systems will achieve equilibrium
- oit would mean that ghettos would attract capital because of low cost; but they don't
- if the model worked, all areas would have about the same level of development; obviously, it doesn't work
- but still it influenced deregulation in banking, utilities, etc
- and still an useful theory

<u>outline</u>

discussion of ps1

levels

"hard" community development: \$ amounts

"soft" development: "community development" (Green and Haines, 2012)

Campbell chapter on community

Cloutier (2nd week) and other specific studies about neighbourhoods

first, a traditional look

- we'll discuss what is a community development in general
- and then we will switch to:
 - the new science of community development and SWB

"Community development" is a buzzword

- "a word or phrase, often an item of jargon, that is fashionable at a particular time or in a particular context"
- Cooper hospital, Wholefoods, our PhD program and classes
- usually "community development" doesn't mean anything it just sounds good
 like we do development with community, but it is a mere
- ad/commercial to sell better whatever we do and sell

 •it's all about \$
- a similar catchphrases in business: "global" "leadership" "challenge" "solution"
- SWB research is not immune! we now have "happiness

what is community?having community means having social interactions in

- pursuit of common interest

 (neighborhood is just a spatial location)
- living in the same place is not sufficient for having a community
- not necessarily common values, can be heterogeneous (race, income, age, etc)
 Green and Haines (2012) focuses on "communities of place", but
- material is also relevant for "communities of interest"
- social capital is the key

"soft Community development nd Haines, 2012)

social capital is both: resources and constraints for

what is social capital?

- You probably understand social capital as civic engagement (voting etc) while I define it broadly: time spent with other people, marriage, church attendance, etc etc
- christakis/fowler: network property is connections: like carbon and diamond defined not by stuff but connections

what is development?

- traditionally economists thought of it as:
- o GDP, PCGDP, PPP adjustments, and HDI
- now even economists start to recognize that development is more that production or consumption (Stiglitz et al., 2009)
- GDP just measures production; so say if there is more traffic congestion, GDP goes up
- o but that's not development
- and so Stiglitz et al. (2009) proposed new measure of development: happiness

what is development?

- Green and Haines (2012) approach is similar, but instead of composite "happiness" measure they break it down into various capitals: human, social, political etc
- o and they call it "community development" which is much broader than economic development

development as freedom

- Sen (2000) proposes capabilities approach
- essentially freedom is a measure of development:
- opolitical freedom (civil liberties)
- o economic facilities (household resources)
- o social opportunities (educ, healthcare, etc)
- transparency guarantees (citizens-govt trust)
- protective security (social safety net)

bottom-up

- community development is rather a bottom-up process
- that is, communities organize themselvesrather than being organized by state or federal government
- maybe more so international development, but still you cannot impose your plan on people, you need to talk to them
- o and so Jacobs ([1961] 1993) criticizes housing projects/parks as not serving people; people for instance want a convenience store...
- o need to have that grass-roots support; ask people

what is community development

- "planned effort to built assets that increase the capacity of residents to improve their quality of life" (Green and Haines, 2012)
- the effort is organized/planned
- assets are gifts, skills, capacities of persons, associations and institutions
- o "capacity" is similar to Sen's "capabilities"
- QOL can be objective or subjective and they are different (Okulicz-Kozaryn, 2013)

assets classification by Green and Haines (2012)

- physical (laptop, chair)
- human (education, skills)
- social (connections with others)
- financial (\$\$\$)
- environmental (forest, lake, beach)
- political (your uncle in Congress; you need to know somebody to get things done; know anybody who got a job without knowing somebody?)
- cultural (arts, diversity, creativity; creative class)

asset building and social capital

- again, much boils down to social capital
- asset building is similar to participation in local organizations, associations, building social relationships and trust
- social capital is the basis for other assets such as financial capital

growth v development (Green and Haines, 2012, p 6)

- growth: increased quantities of specific phenomena; e.g. jobs, population, income
- development: structural change; resources use, functionings of institutions, distribution of resources
- community development often must precede economic development:
- good infrastructure, e.g. housing, schools to generate jobs and income
- oalso job training, etc
- community development is broader than economic development

examples of growth but not development (Green and Haines, 2012, p 5)

- increase in wealth of the top percent only
- new employer that employees mostly outsiders
- a new fast-food chain that drains all its profits to the outside
- a paper mill exploiting forest in unsustainable manner

sustainability

 long-term survival of: social, economic, environmental, etc base

A Ladder of Citizen Participation, Arnstein, 1969

1 Manipulation and 2 Therapy, non participative, cure or educate the participants, achieve public support by PR. 3 Informing, one way flow of information 4 Consultation. attitude surveys. neighbourhood meetings and public enquiries. Window dressing ritual 5 Placation. Allows citizens to advise but retains for power holders the right to judge the legitimacy or feasibility of the advice. 6 Partnership. Power is redistributed through negotiation between citizens and power holders. Shared decision-making responsibilities.

7 Delegated power to make decisions. Public now has the power to assure accountability.

8 Citizen Control. Participants handle the entire job of planning, policy making and managing a programme.

http://lithgow-schmidt.dk/sherry-arnstein/ladder-of-citizen-participation.html "soft" development: "community development" (Green and Haines, 2012)

Arnstein (1969) Ladder of citizen participation

34/38

public participation...

- is a form of social capital
- key for community development
- participation is developmental, educative, integrative (Green and Haines, 2012, p 15)
- if you have a say in the project, you will support it and the project will be more successful, as opposed to when somebody (govt) tells you what to do
- and people have a better idea about assets and needs
- and there can be no democracy without participation
- participation rightly called a 'bedrock' of democracy

models of community development

- self-help: facilitate, help communities help themselves
- oidentify goals, build leadership skills, resolve conflicts
- o may yield long-lasting outcome
- technical assistance: provide consulting, information
- organize and advocate, organize people
- may be difficult in heterogeneous localities (e.g. race, ethnicity)
