MMQGIS-Geocode

- ○ MMQGIS-Geocode-Geocode CSV with Web Service
- ○ Input CSV, and make sure Address Field, City Field, State Field are right; best if you give more info
- ○ Web Service: OpenStreetMap/Nominatim
- ○ make sure notfound.csv (and output shp) saved where you can write!
- ● ref: https://mangomap.com/blog/
  how-to-make-a-web-map-from-a-list-of-addresses-in-a-spreadsheet/

- ● >qgis3.5, seems can have everything just under address!

- ● btw, if already got X/Y lat/lon:
  just add your csv with "Add Delimited Text Layer" tool
  make sure geometry definition tab (X,Y) fits your data
- ● hit "Apply", note how many found, hit "Close"
