<u>outline</u>

intuition

general idea, intuition

- data management is mostly about:

- manipulating eg gen, map, [:]–today!

- (and related understanding, des sta/vis
  eg describe, value_counts–last week)

- (and merge–next week)

- pretty easy–no complicated code, no fancy things

○ but also lame, boring, and tedious

○ yet necessary!

basic coding rules

- simplicity, clarity, efficiency:
- ○ drop everything that is not necessary
- ○ drop the clutter and be clean
- have "tight" code:
- ○ as few lines as possible that do as much as possible
- be lazy (copy from others, not 100% !)
- ○
- more rules later
