# 1 feb19 playing with wvs

## 1.1 vars

first looking at what we have here that can use

obviously we use

A173 How much freedom of choice and control

Some people feel they have completely free choice and control over their lives, while other people feel that what they do has no real effect on what happens to them. Please use this scale where 1 means "none at all" and 10 means "a great deal" to indicate how much freedom of choice and control you feel you have over the way your life turns out.

```
Tabulation: Freq.   Numeric  Label
            15,177        1  None at all
             9,141        2
            16,011        3
            20,756        4
            56,829        5
            48,677        6
            64,361        7
            77,430        8
            44,136        9
            77,016       10  A great deal
            21,335        .
```

But maybe also?:

Autonomy-4 item Index=(a029 +A039)-(a040 + a042) Only questions with answers to the 4 items are considered. -2 Obedience/Religious Faith to 2 Determination, perseverance/Independence

---

Important child qualities: [0 Not mentioned; 1 Important]

A029 independence

A039 determination, perseverance

A040 religious faith

A042 obedience

```
131,200        0
115,286        1
 49,393        2  Determination,
                  perseverance/Independence
```

vars from leonie's slide: TODO add others from there https://docs.google.com/presentation/d/1YpGP1VmirIAtTRtKqrpcI0ef7xS

**Table 1:** OLS regressions of gov more responsibility (v ppl take care of themselves).

a1: ok more autonomy by 1 on 1-10, want less redistr by .13 on 1-10 scale

a1cc: adding country dummies doesnt change anything

a1satFin: reduced by almost half!, note satFin correlates with agency at .33

a2: basic sociodemographics, and effect size still large at .1

a3: freedom * financial satisfaction–interesting while satFin alone less redistribution; interacted with autonomy, the more preRed

one contribution to dummy out like in my papers :)

easy to see big effects by 1 on over 5 or 6 on free–over 5 smaller changes, also first three almost no change, and then jump at 4 and then some on 5 snd 6–shows nonlinearity; and i guess also confirms leonie's point of "double barreled" ie can split in half autonomy var, and here this shows that it splits about in half at 5 or 6

b2: still around 1

b3: lower, but .7 is sizeable

## 1.2.1 by country

another contribution by c, like my cities paper: `https://www.sciencedirect.com/science/article/pii/S0264275121002687?via%3Dihub`

here a quick exercise, just separately by capitalistic/alienated/western c about .15-3 v humanistic/social/latin c about 0-.1—clear differences; and they hold controlling for basic sociodemographics

in BRA positive!; DEU close to 0, but not in AUS; ARG close to capitalistic/west

```
