1 Research

Since 2017, when I have submitted my materials for promotion to associate professor with tenure, I have published 37 peer reviewed articles, including 7 in *Cities*, a journal with impact factor (IF)=7.8¹ higher than widely considered the top journal in public administration in the US, *Public Administration Review* with IF=6.2².

I have also published # of articles (add lonnie rubia now minor revision) in *Social Indicators Research*, and # in *Applied Research in Quality of Life*, both leading/main journals in my field of quality of life, wellbeing, and life satisfaction. There are several works worth mentioning.

My main area of research has been urban-rural happiness gradient, a term I have coined in my early paper on the topic: An urban-rural happiness gradient B.J.L. Berry, A. Okulicz-Kozaryn - *Urban geography*, 2011

articles on urb-rur hap gradient throughout, esp after 2017 do mention micah paper religiosity voluntas ditalia paper religiosity and latin am inc col fools paradise etc

2 Teaching

publishing with students—academic path: and it works: shourjya sipri, aditi virginia tech, michael ditalia RU camden

Teaching: old fashioned critical thinking, no indoctrination so popular these days

from that response to jargo: prioritize transfer of knowledge and learning, not ornamented ceremony; seems to be working: Eric's email that it works in practice, yanan, prakash, that student that got job at philadelphia school district; dodda. ,etc

Something I have missed as a student, and promised myself I won't do on the other side as an instructor. I have found almost all instruction to be fluffy, ornamented, grandiose presentations, where form took more space than matter. Also that paper in scientometrics. And even transfer of knowledge, seemed like most of it wasn't essential, important, helpful to me—plainly speaking most of the work was waste of time. Now as an instructor I strive to focus only on most important things and teach in most simple and straightforward way and also decrease amount of instruction and increase interaction: discussions, presentations, flip the class etc. I believe that these changes are even more important in current reality: short attention span, mental health problems, AI, etc.

Note it is not watering down the curriculum. i provide plenty of extra bonus materials so that it is customized to a student, doesn't overwhelm with unnecessary stuff, but provides enough depth and individual learning path. Seems to work as evidenced by student publications, jobs, and feedback.

I make sure i am available and approachable for students spending extra time outside of classroom: working on papers, being accessible via zoom and in person etc including when on sabbatical, eg spring 2026 have 4 students enrolled in my dissertation hours
also note i largely teach methods classes, which often receive lower evaluations

one highlight is unusually heavy curriculum development. Since coming to Rutgers-Camden in 2012, I have taught over 10 different classes, including developing brand new 3 courses in 2023 for our new data science program

i strive to improve my teaching: that ru idt course, reading on it eg insidehighered and psychologytoday etc, i am updating materials each semester

3 Service

My service mostly builds on and derives from my main focus and strength, research. I provide such service in two main ways: 1) to the profession/scholarly field, and 2) to students.

I review about 3-4/mo or 36-48/year papers for journals, including the top journals such as Journal of Personality and Social Psychology and Public Administration Review. Reviewing is an essential foundation of scholarly fields, and it is increasingly in short supply—something I can attest to as an editor of a journal. Since January 2024, I co-edit Social Indicators Research, the leading journal in my field (quality of life, wellbeing, and life satisfaction).

My research-oriented service over past 6 years 2020-2026 to students is: 10 peer-reviewed articles with students [!?!?TODO adding current sir paper flexi work hours rubia ebshoy lonnie], supervised 8 dissertations (4 graduated; 4 in-progress), served on 11 dissertation committees, supervised 6 data science master theses, served on 2 master thesis committees in social science, and supervised 15 independent studies.

While research-oriented service is my main strength, I am mindful of Rutgers-Camden mission and specific situation of our campus. I agree that as a public university, we also need to provide service to the community. Assisted students (as on cv) etc. GIS dashboard etc.

As we are a small campus and a very small department, I also try to contribute service to the department and campus. The main 2 highlights are foollowing. First, responding to enrollment challenges, I have lead the development of new program MS in data science. This was a substantial undertaking and also somewhat challenging as the newly created program is located outside of my home department.

Second, as we are short staffed and "spread thin" I have volunteered to hold multiple independent studies and doctoral dissertations: #?; also A&P and other items from CV.

4 Appendix

4.1 Research

scientometrics: as per google scholar i have more than doubled my citation since 2017, when I have submitted my materials for promotion to associate professor with tenure, from 163 to 353 in 2025; according to scopus <https://www.scopus.com/authid/detail.uri?authorId=23061538900> i have had about 4 indexed publications per year since 2017 and also my citations more than doubled between 2017 and 2025

4.2 Teaching

address low swb class eval bc on angela like cp paste all verbal stuff from 3 students incl 2 paraguay, and from my response to patrice

4.3 Service
