outline

why data management?

Python v R v Stata

cool data (in addition to these on syllabus)

introductions (see if others overlap: collaborate!)

- `https://theaok.github.io`
- you:
  - research interests
  - datasets
  - (see if others similar or potentially intersecting/complementary–collaborate)

outline

why data management?

Python v R v Stata

cool data (in addition to these on syllabus)

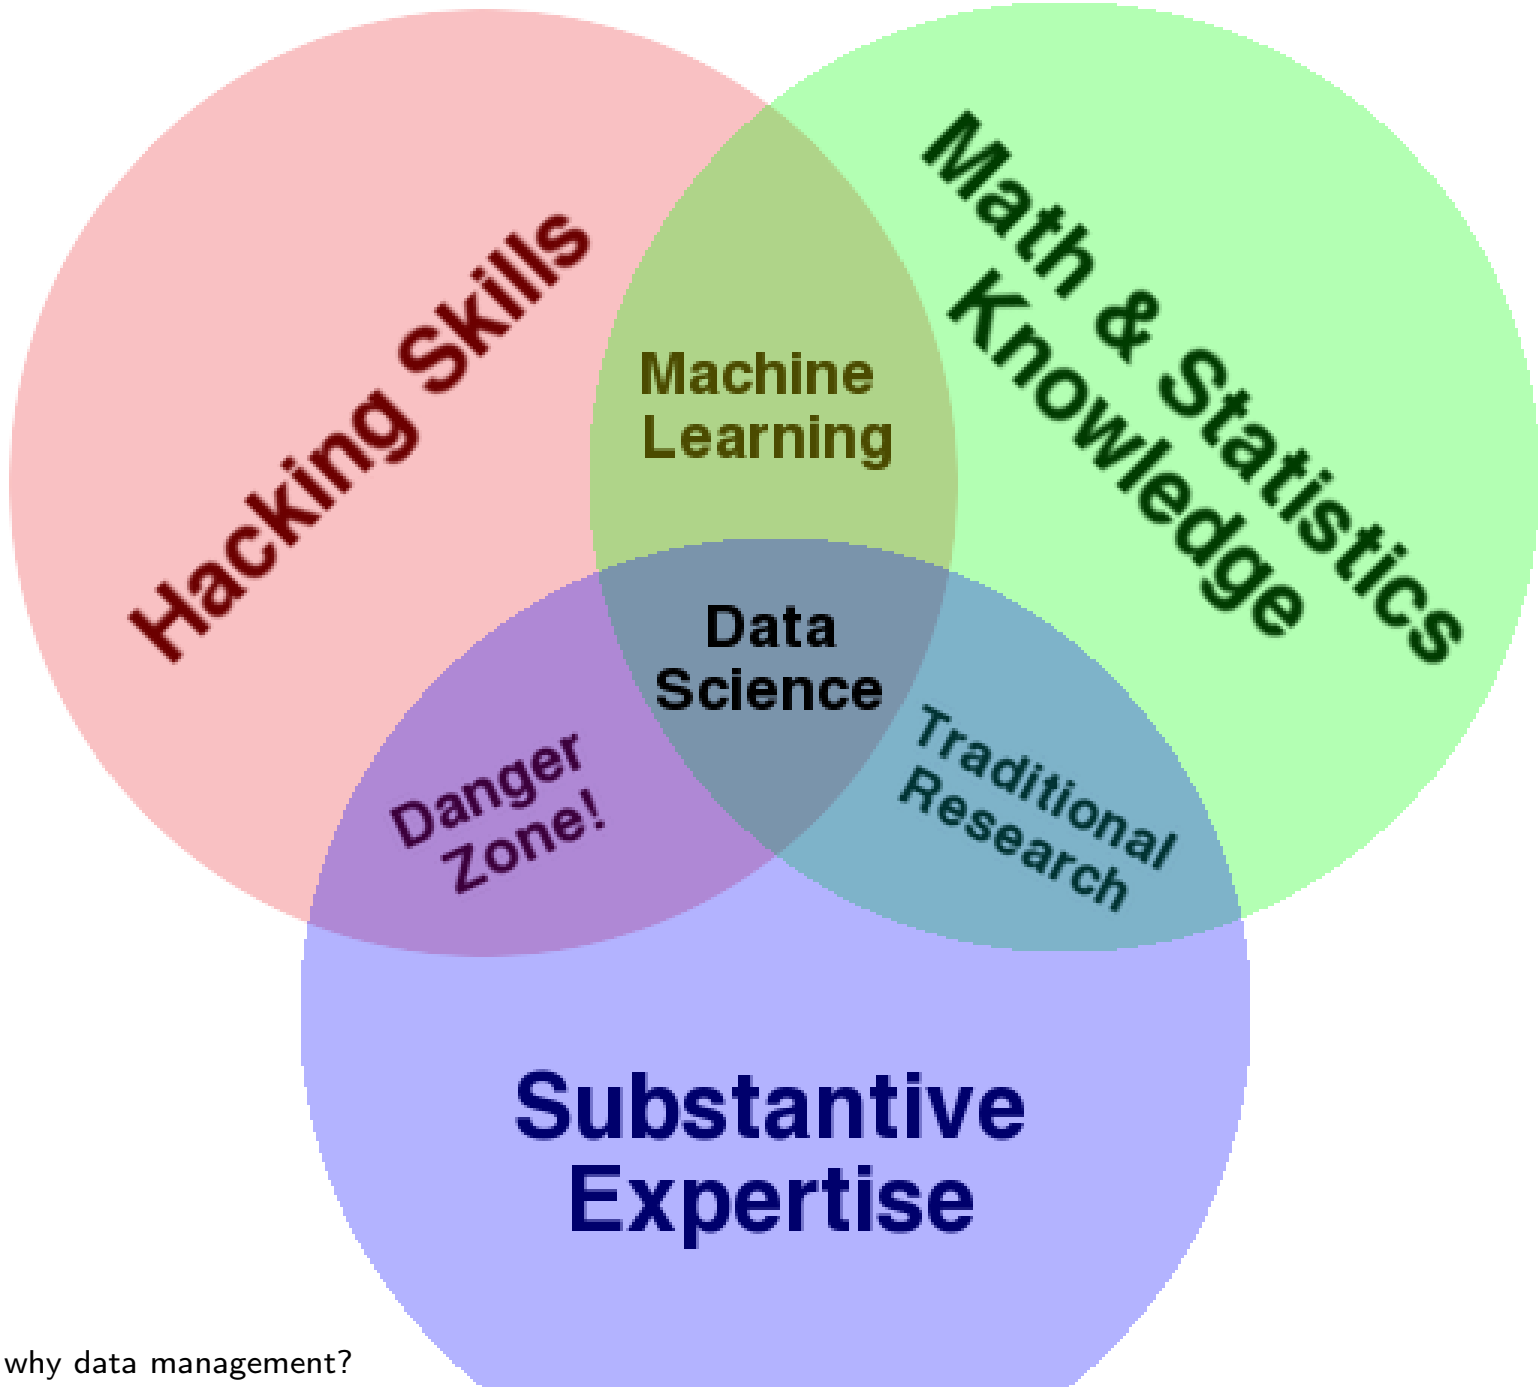

data revolution, a ton of data!

- qualitative data (pictures, text, etc.) are just rich quantitative data and can be analyzed like quantitative!
- everything can be quantified or not? any examples of non-quantifiable things?

data management is fundamental

- in order to analyze data you need to manage it first
- GIGO (Garbage In Garbage Out)
  if data management fails, data analysis fails
- takes more time to prepare data than to analyze it
- start early with the right data!
  - you're passionate about
  - is doable/easy
  - advance your career/think beyond school

already have stat/math and subst, need hacking!

outline

why data management?

Python v R v Stata

cool data (in addition to these on syllabus)

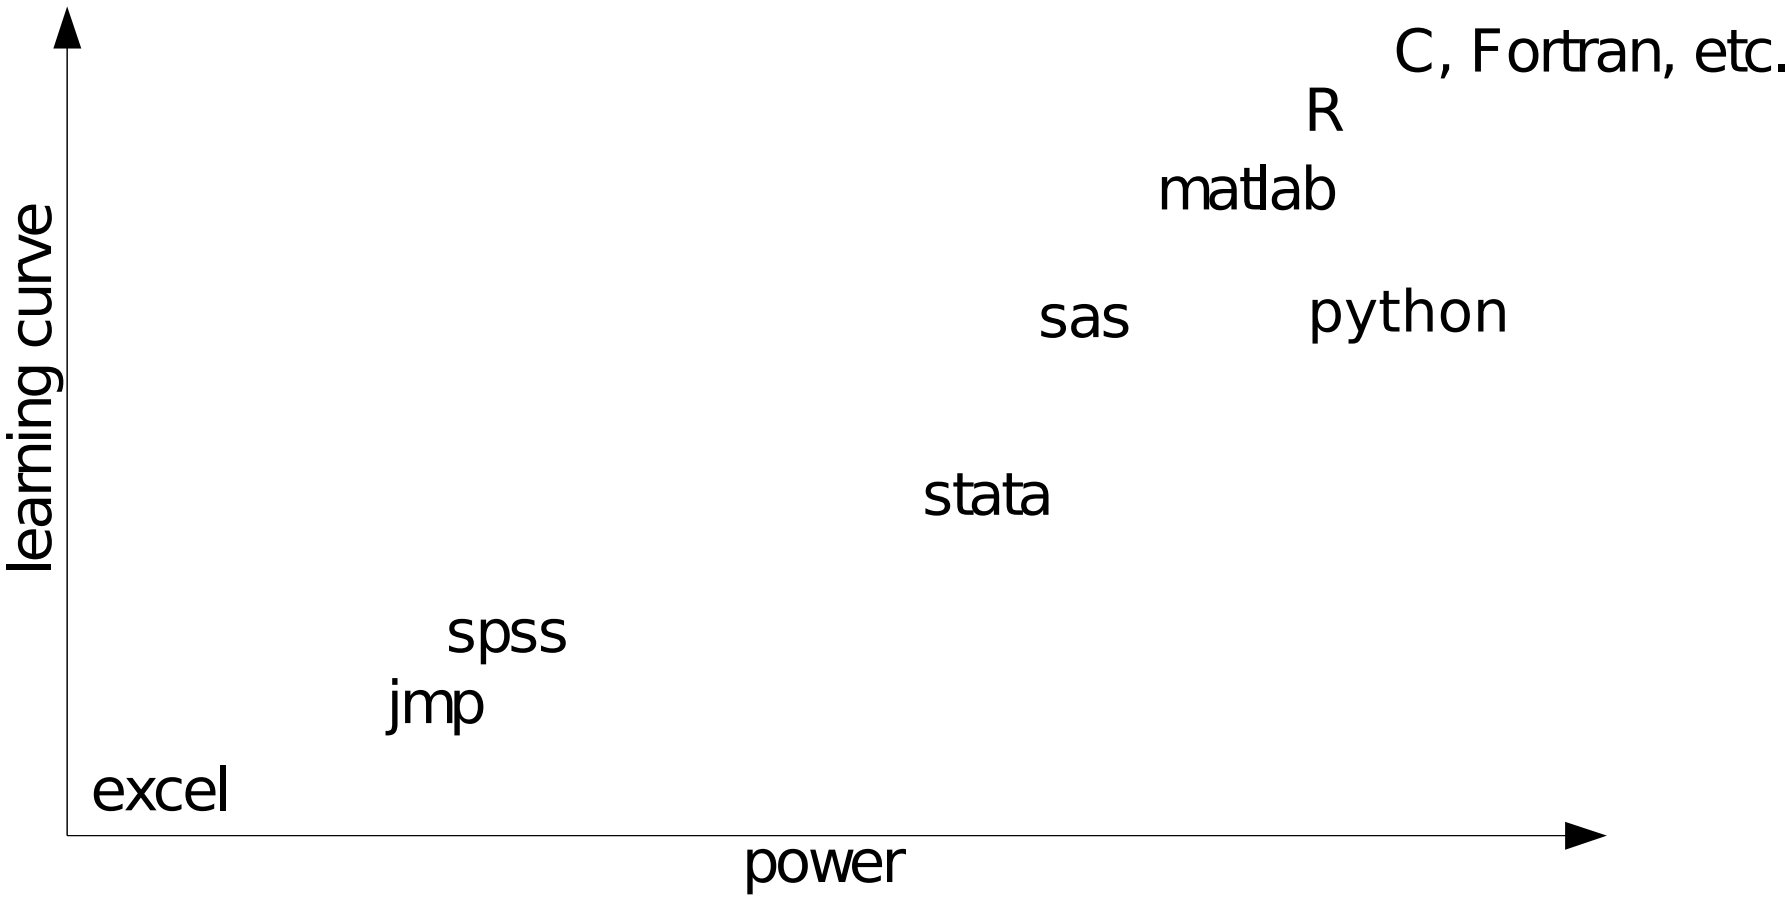

a critical decision!

- takes months to get productive with software
- takes years to master
- excel and spss are usually junk
- sas: a dinosaur (still, often industry standard)

which one?

- stata: user friendly, fast, very concise code [soc sci]
- r: user unfriendly, slow; weird code! [math]
- py: clean and fun; [IT]
- btw julia seems like a great idea!

which one?

C, Fortran, etc.
R
matlab
sas
python
stata
spss
jmp
excel
learning curve
power

outline

why data management?

Python v R v Stata

cool data (in addition to these on syllabus)

quick data sources (we will be adding more!)
